

LIGHT POINT SECURITY TO COMPETE AGAINST TOP SECURITY INNOVATORS AT ANNUAL SECURITY INDUSTRY INNOVATION EVENT

Light Point Security Recognized For Innovative Malware-Free Web Browsing Technology

SANTA CLARA, CALIF. – Feb. 18, 2013 – Light Point Security today has been named one of ten finalists for [RSA® Conference's 2013 Innovation Sandbox](#) program. Innovation Sandbox is a half day gathering of venture capitalists, entrepreneurs and security professionals pioneering the future of information security. The finalists represent new technologies and strategies with the potential to transform the future of information security. On Monday, February 25, Light Point Security will have the opportunity to demonstrate its security innovation to the Conference's esteemed panel of judges and be named Most Innovative Company at RSA Conference 2013.

“Being selected as an Innovation Sandbox finalist affirms that these organizations have identified proactive ways of solving and executing solutions to security obstacles,” said Sandra Toms LaPedis, Area Vice President and General Manager of RSA Conference. “With Innovation Sandbox, RSA Conference showcases the companies and individuals creating out of the box technologies that will continue to drive security evolution. This program also provides a concrete platform for other ambitious start-ups looking to invigorate the information security industry.”

Light Point Security's product, Light Point Web Enterprise, is the first and only server-based virtual-machine-in-a-browser. It is a secure web browsing solution to protect enterprises from web-based malware. It isolates each employee's browsing session within a one-time-use server-based virtual machine that is destroyed immediately after use. By isolating the dangerous task of parsing and rendering websites in a disposable virtual machine, Light Point Web Enterprise makes it impossible for web-based malware to infect a corporate network.

“Today, 85% of all malware is delivered through web browsers, but the web is simply too vital a resource for enterprises to restrict,” said Beau Adkins, co-founder and CEO of Light Point Security. “Our technology gives users the ability to access the web, but in a way where malware can do no harm. We have worked tirelessly to create this technology, and we are honored to present it on stage at the Innovation Sandbox.”

The “Most Innovative Company at RSA Conference 2013” winner will be determined at the conclusion of Innovation Sandbox, after each finalist gives a short presentation to a panel of judges including Asheen Chandna, Partner at Greylock Partners; Paul Kocher, President of Cryptography Research; George Hoyem, Investment Partner at In-Q-Tel; Alastair Goldfisher, Editor at Venture Capital Journal; and Gerhard Eschelbeck, CTO & SVP at Sophos.

Additional information about the “Most Innovative Company at RSA Conference 2013” contest and Innovation Sandbox program can be found at:

About Light Point Security

Light Point Security is a startup based in Baltimore, Maryland founded by two former NSA employees. The company is dedicated to stopping malware infections delivered through web browsers. Instead of relying

on security through detection, its products use virtualization and cloud technologies to provide security through isolation. For more information on Light Point Security, visit lightpointsecurity.com or follow us on Twitter at @LightPointSec.

About RSA Conference

RSA Conference helps drive the global information security agenda with annual events in the U.S., Europe, and Asia. Since 1991, RSA Conference consistently attracts the best and brightest in the field, creating opportunities to learn about information security's most important issues through face-to-face and online interactions with peers, luminaries and emerging and established companies. As information security professionals work to stay ahead of ever-changing security threats and trends, they turn to RSA Conference for a 360-degree view of the industry. RSA Conference seeks to arm participants with the knowledge they need to remain at the forefront of the information security business. More information on events, online programming and the most up-to-date news pertaining to the information security industry can be found at www.rsaconference.com.
