Banner (Indoor) - 36" x 96"

Setting up your files for print is very important in order to ensure your job is printed as desired, and without extra design fees. Our website, commonvision.umbc.edu, offers pre-created templates for many of the common print jobs, and these templates include important information like trim lines and margin information, which will ensure the best possible print. These templates are offered in .PDF, .PSD(Photoshop), and .AI(Illustrator) file formats for any number of computer graphics programs, and will not only speed up your design process, but help us serve you better. We have also included PowerPoint and Publisher templates for quartercards and posters.

If you have a different size for wide format, we have a wide-format calculator that is available on our website to help with pricing.

* For lamination and mounting, add the pricing of the paper quality with the amount of lamination. And if mounting as well, hover over "Mount on foamboard for \$5.00" and it will change the prices underneath to calculate the correct amount to add to the original amount of the preferred paper quality.
